

Dear Customer

Object: PVC in PP and PET punnets

PVC is the common name generally applied to identify polyvinyl chloride (CAS No, 9002-86-2). It has been in use for many years and has many uses, both non food (e.g. electronic cable, pipes etc) and food contact related items such as films and food and beverage containers.

INFIA position

INFIA does not intentionally manufacture PVC nor, as the best of our knowledge, it is intentionally used in any of the raw materials used in the fabrication of the products we manufacture for fruit and vegetable packaging.

PP and PET raw materials (and masterbatches when it is necessary) are extruded and thermoformed and the process is conducted without any intentional modification of the formulation.
